Learning n°5

Risks and dashboards

Interactions

Use and (abuse) of emojis

Activate your Mic /
Webcam if desired

Use the chat to write
your questions

Interactions should be
limited to
misunderstandings or
clarifications of the
concepts on the
agenda

Special cases &
implementations will
be preferred over
integrator / CSM
workshops

What are we going to see in this
workshop?

Main topics

Risks

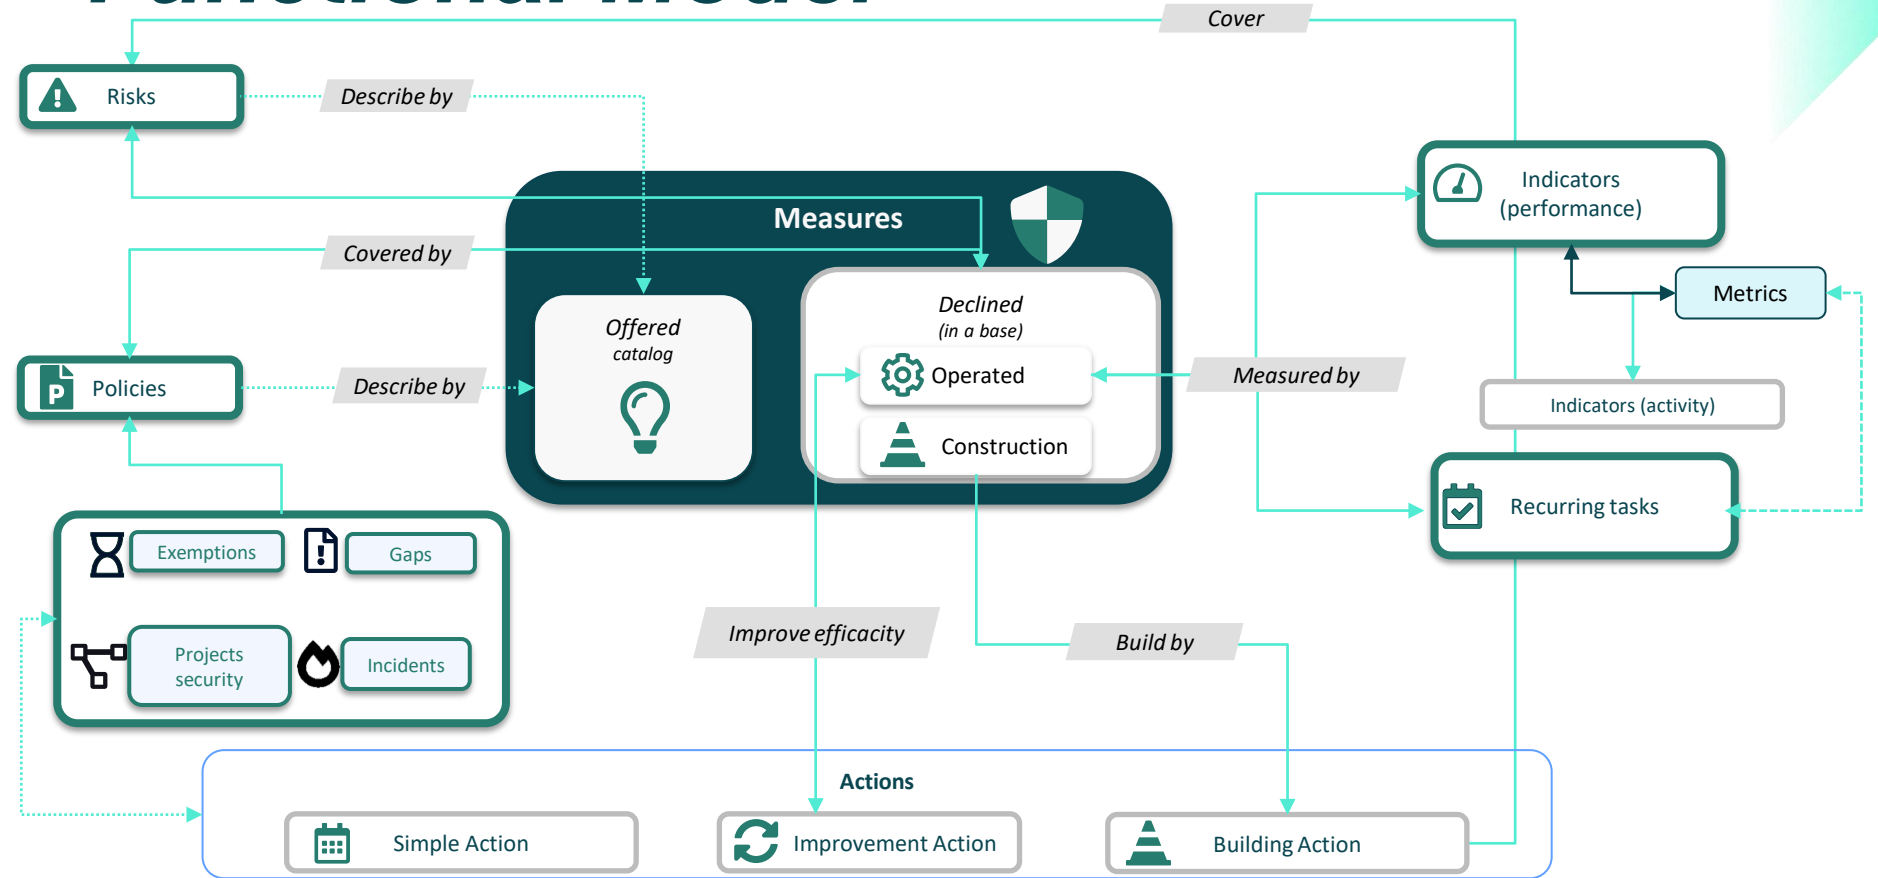

Risk registers

Dashboards

Sharing dashboards

Functional Model

Risks

Tenacy allows the continuous management and measurement of your risk treatment.

Inputs are :

- A perimeter
- A title
- An initial cotation (structural)
- A minimal cotation (risk 0)

The scales used are configurable for the whole tenant

A register allows several risks to be grouped together to consolidate the reporting

A risk may belong to several registers

An uncontrolled measure performs at 75% by default. This value is modifiable: `risk_default_measure_performance`

Measures are associated with a risk :

- Operated : In Run
- Construction : Project

Tenacy allows you to manage your risk

Risk Approval

- By a contributor / admin
- A change in the plan will lift the approval

The screenshot shows the Tenacy web interface. On the left is a navigation menu with sections like 'MY SPACE' and 'COMPLIANCE AND TRACKING'. The main area is titled 'Preferences' and contains a search bar with 'performance' entered. Below the search bar is a table with the following content:

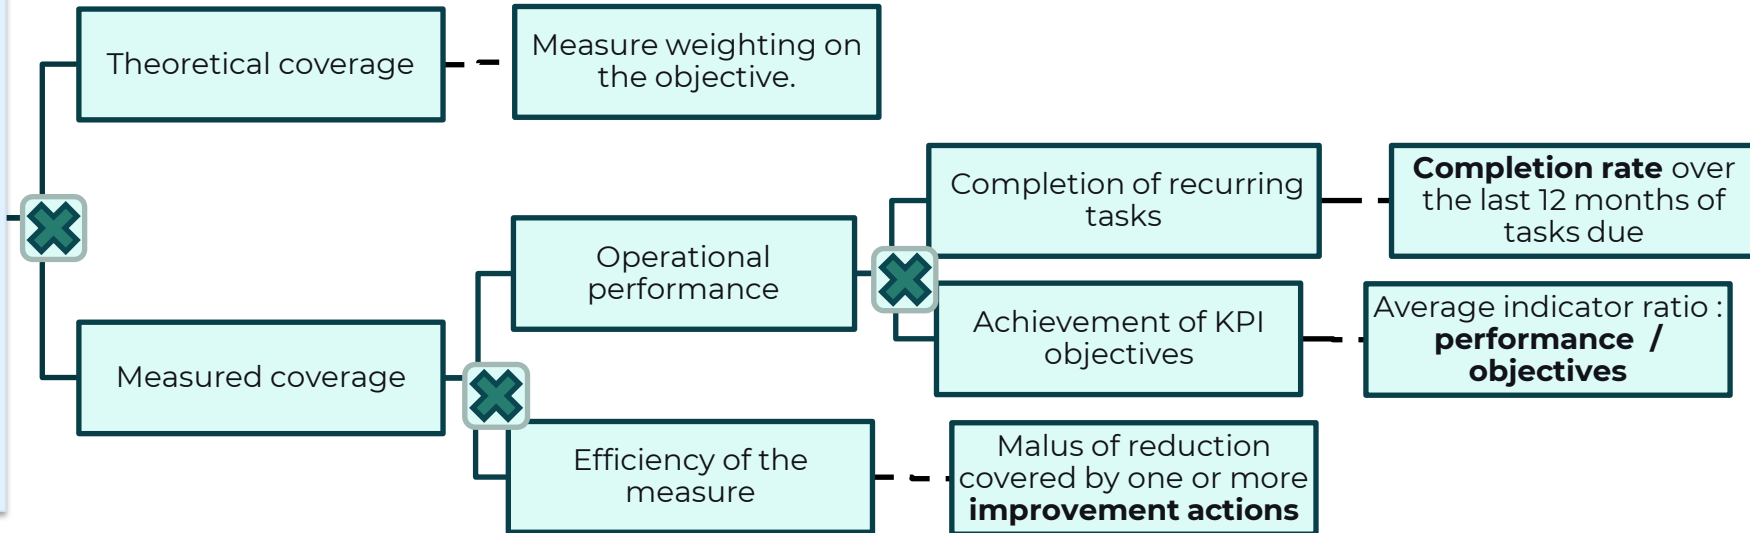

Key +	Description
<code>measure_default_performance</code>	Default performance score for non-monitored measures (no indicator nor...)
<code>performance_scale</code>	Measure performance scale
<code>risk_default_measure_performance</code>	Default measure performance for risk reduction computation
<code>warn_measure_performance</code>	Threshold used to display warning when displaying measures

On the right side of the interface, a dropdown menu is open, listing various settings categories. The 'Preferences' option is highlighted with a red box.

Measure performance

One of Tenacy's purposes is to impact the measurement of the achievement of your objectives by the performance of the measures

Impact of the measure
on the objective

Measures without controls will have an applied "operational performance" value for policy calculation. Configurable value for risks and policies

Dashboards

View and monitor all internal or operational indicators

You can set as many dashboards as necessary

A contributor only accesses the dashboard assigned in the cockpit

A “private” dashboard is not accessible to any user (apart from the one who defines it as private)

Sections to organize your dashboards

Versions allow you to freeze a dashboard and share it

For each block define the representation, colors etc.

Indicator scales are used to define representation thresholds

The dashboards can also be used:

- By exporting the images
- By sharing the sharing link

To go further

Keep In Touch
